## LOCATION

London

Fevzi is a seasoned software engineer, architect, and business leader who has built his own successful software companies over the years. With his unique ability to view business challenges from both a solution-oriented and commercial perspective, he offers a comprehensive approach to enterprise software development and execution.

With over three decades of experience in the business software industry, Fevzi has adeptly navigated the various ups and downs of the field, always maintaining an entrepreneurial spirit. His career has spanned the ranks of global software vendors and systems integrators, equipping him with a robust foundation for addressing intricate software challenges. Known for bringing tailored software solutions to the table, he possesses a keen ability to discern the true needs of clients across diverse industries.

Fevzi's career began in the trenches of software programming, giving him a deep, hands-on understanding of technology from the ground up. With over 30 years of deep knowledge in enterprise software solutions implementations, Fevzi has amassed extensive experience across various industries, including enterprise information and knowledge management, business process management, and digital transformation. His career has seen him excel as an executive director, sales engineer, software product and project manager, and developer. Fevzi has delivered business and technical innovation for international corporates across global geographies, start-ups, and SMEs, spanning sectors such as banking, insurance, finance, telecoms, pharmaceuticals, health, and manufacturing.

Fevzi possesses acute knowledge of enterprise software applications, including infrastructure, security, and industry/regulatory standards. His breadth and depth of experience encompass conceptual and technical design (enterprise architecture, business process, database design, and object modeling), RDBMS, software development, and test methodologies. Building on his background as a software developer, Fevzi excels in initial scoping and architectural design, followed by the governance of development and implementation of bespoke, cost-effective, scalable solutions that align with the client's overall enterprise.

Passionate about replicable, industry-agnostic solutions, Fevzi focuses on delivering maximum financial value, with his work motto centered around maximizing the efficiency of any solution. His ability to blend deep technical expertise with commercial insight makes him a powerful force in delivering innovative, software-driven solutions that generate tangible business results.
